

Hello teachers and supervisors!

After your participation in the current platform training and getting acquainted with the Visual Thinking Maps program, we are committed to developing our students' thinking skills and enhancing the love of learning in our classrooms. To help achieve this, we ask each teacher to create a preparatory plan for a classroom lesson in any subject they choose, using one of the visual thinking map models that we have learned. Visual Thinking Maps are a powerful tool for developing students' thinking skills, and by integrating them into our lesson plans, we can help our students become more thoughtful, critical, and creative thinkers. Please submit your daily preparation plan and send it via the following email: [Enter the desired email]. After the training is completed and obtaining a certificate of successful completion of the program, thank you for your dedication to our students' success!

Preparation Method:

- Preparation is done on a Word or PowerPoint file.
- Choose a specific lesson and write the title of the lesson and the grade level the lesson targets.
- Identify the thinking map that suits the class you have chosen.
- Write the lesson procedures stating where you will use the thinking tools (in the introduction, through a project, activity, etc.).
- Identify your assessment mechanism for the students' mastery.
- Identify the educational tool and method you will use to apply the key.
